

FEEDING BOTTLE. Artificial feeding is far from being considered as projudicial to health. The conviction is more and more frequently finding utterance from Physician sepecially acquainted with this subject, that feeding by means of a good bottle, such as the B. W. & Co. Patent Thermosafeguard, is to be preferred to the service of a safeguard, is to be preferred to the service of a wet nurse. Cow's milk previously predigested with a Zymine Peptonizing Powder is preferred to mether's milk in cases where this is not of normal quantity & quality. The bottle has thermometer embedded in the glass; it is also graduated in ounces, so that the precise amount of food administered can be observed. The Edinburgh Medical Journal pronounces it "the best of all coding bottles."—Supplied by all Chemists. h2
